

Task-2.5

- ❖ Mention your models/tables from Exercise 2.3, and specify if (and why) you're changing any attributes. This will include the addition or deletion of attributes, updates in data type, moving attributes from one table to another, or any other reason that you consider important.
 - In the Recipe model, my attributes were a (recipe) name, cooking time (in minutes), and ingredients. I also had a function that calculated and returned a difficulty level for the recipe. I will be adding 3 attributes to this model - a description, instructions to follow, and an image. The description will provide an overview/brief explanation of the recipe and what to expect. The instructions section (an important piece of any recipe) is needed for users to follow along. An image (optional) would provide a nice visual of the resulting food item. I also decided to increase the maximum length for the ingredients input box, as I do not want to overly limit the user in the case the recipe calls for many (or specific) ingredients.
 - In the User model, I initially only included a username and name. I will be adding a profile picture and bio (both optional) that would allow the user to personalize their profile.
